

In The first page i used one button(for launch) and one label (to tell the info to click launch) and an image.

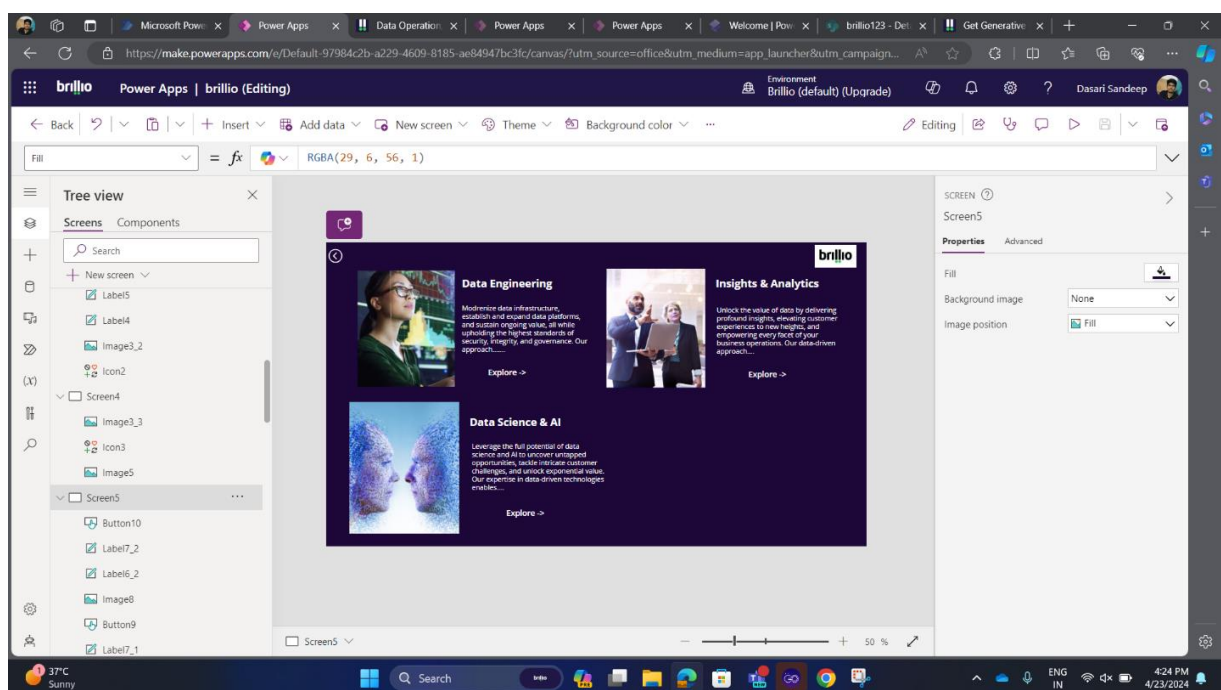

After Clicking/pressing the launch button you will be sent to next page where it consist's of one back arrow (to move to previous page) and 5 buttons which will navigate it to next pages

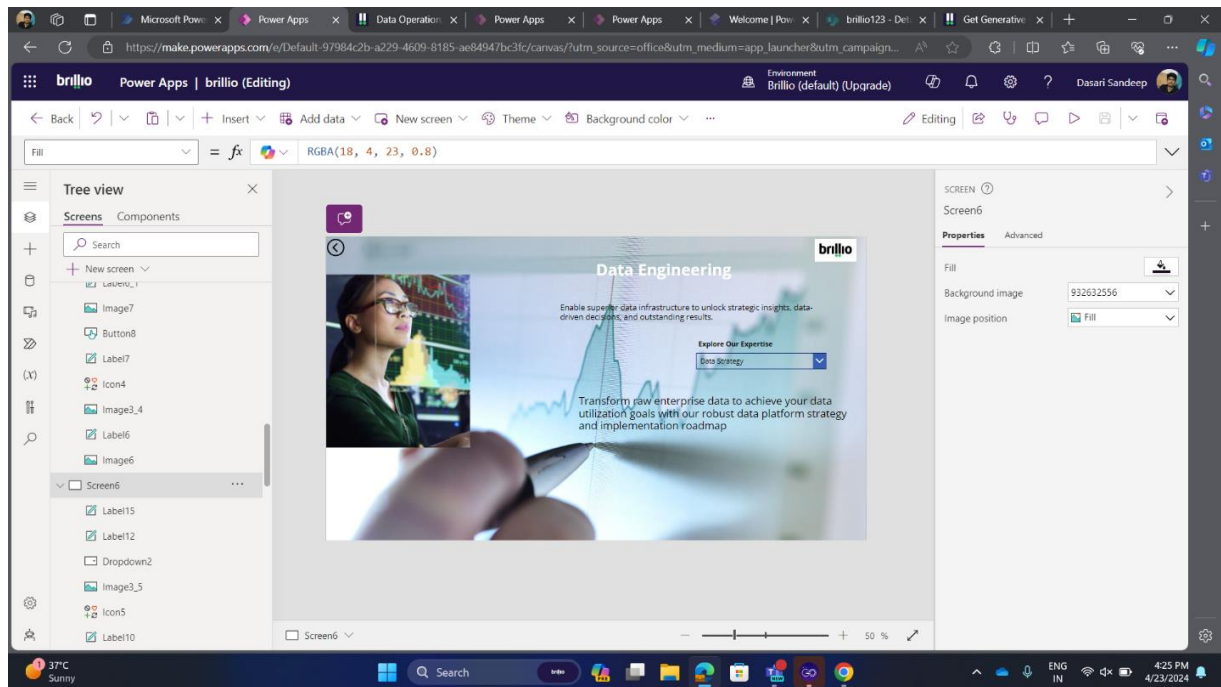

In this page 2 we have seen an button called as The value we bring after pressing it will navigate to this page which consists of one pic and one back arrow which will navigate to page 2, and two text labels

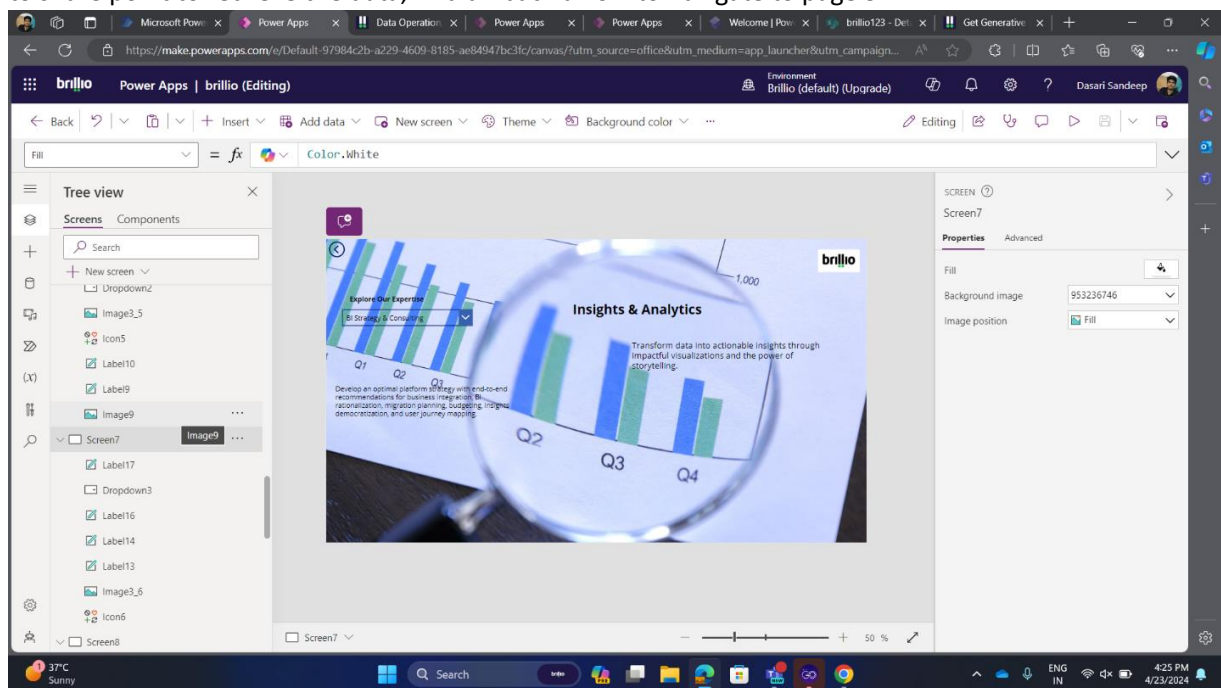

In page 2 there is a button called as Recognitions after pressing that button you will be navigated to this page. There is a back arrow which is used to navigate to page 2

In page 2 there is a button called Capabilities. After pressing it will be navigated to this page here I used one back arrow which will be navigated to page 2, And then three images and then 6 text labels and then after three button's (Explore) which will navigate to their respective pages.

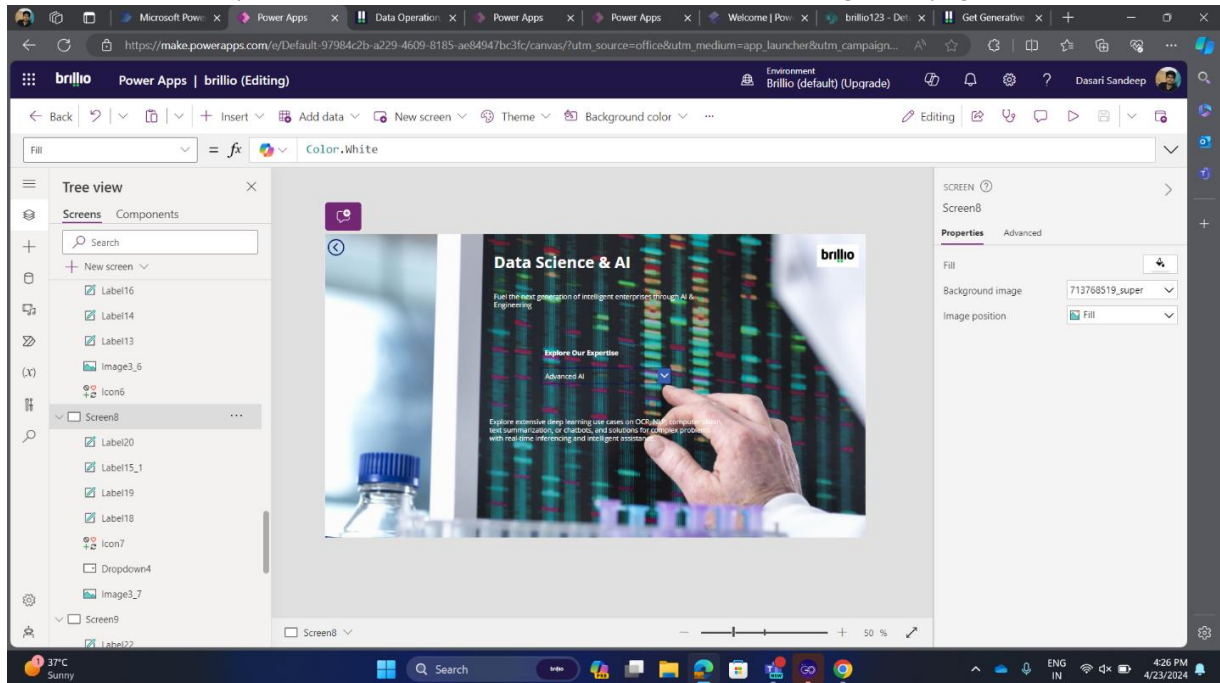

In page 5 there Three button's if we press the Data Engineering explore button then it will be navigating to this page, Where you can see some info about it and I used three text labels in which two will be static and one will get changed according to what was selected in dropdown box. which was connected to share point to retrieve the data, And an back arrow to navigate to page 5

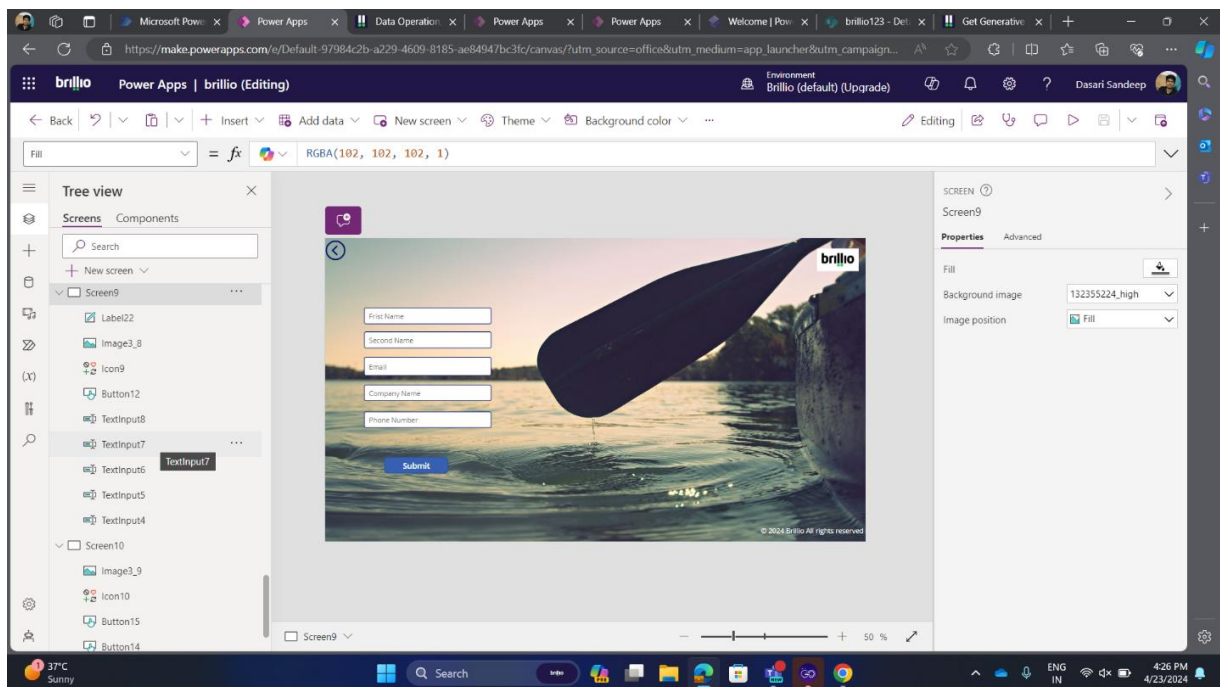

In page 5 there Three button's if we press the Insights & Analytics explore button then it will be navigating to this page, Where you can see some info about it and I used three text labels in which two will be static and one will get changed according to what was selected in dropdown box. which was

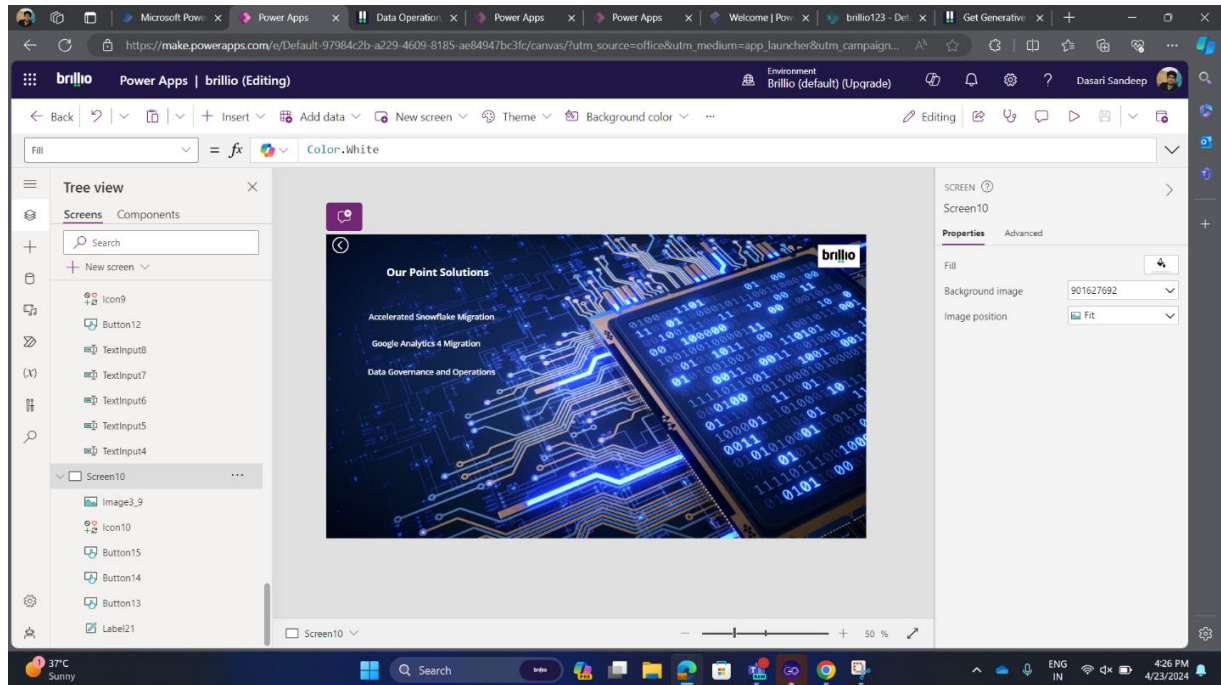

connected to share point to retrieve the data, And an back arrow to navigate to page 5

In page 5 there Three button's if we press the Data Science & AI explore button then it will be navigating to this page, Where you can see some info about it and I used three text labels in which two will be static and one will get changed according to what was selected in dropdown box. which was connected to share point to retrieve the data, And an back arrow to navigate to page 5

In page 2 there is an button called as let's connect, As we press it will be navigated to this page as here we will collect the details of user who are interested. There by the date get stored for further use.

In page 2 there is button called solutions after clicking it then this page will get navigated to this page where I used one text label on three buttons where I used launch function to open link in web.
